SMP Logic Systems Announces License of its Intellectual Property Portfolio to a Multinational, Global Supplier of Process Equipment and Systems

LOS ANGELES, CA, July 15, 2014 – SMP Logic Systems, a research based software development company focusing exclusively on pharmaceutical manufacturing industries, announces today that it has licensed the entirety of its intellectual property portfolio to a multinational, global supplier of process equipment and systems.

The scope of the license grant covers SMP technology patents, including without limitation, those patents directed to pharmaceutical and baby formula manufacturing environments including process and systems management, continuous real-time quality monitoring, historical tracking, failure analysis, risk-based assessments, track and trace solutions, and manufacturing execution systems (MES) including real-time reports to business units.

About SMP Logic Systems
SMP Logic Systems is a research based software development company focusing exclusively on pharmaceutical manufacturing industries. Its products aim to revolutionize pharmaceutical manufacturing processes and systems allowing manufacturers to fully integrate process controls. SMP Logic Systems offers several platform technologies that enable pharmaceutical manufacturers to monitor and track the entire manufacturing process from inception to completion. The Company's offices are located in Los Angeles, CA. For further information about SMP Logic Systems, please visit www.smplogicsystems.com
